**How to Score the Scion Image Project**

As you know, measurements in Scion Image always come with a degree of uncertainty. Two people can measure the same image using the same techniques and arrive at two different answers. Taking this into account, this is a scoring sheet which will allow you to properly grade your project while considering the “slack”.

There were ten questions. Each question can score a maximum of ten points. Check your answer against the separate answer sheet (my measurements). Calculate the difference between your answer and my answer, e.g., if my answer was 1.0 (I made this up) and your answer was 0.8, your answer would be within 20% of my answer. You would look at the chart below to figure out how many points you got for that question. Add them up and that’s your grade. Email your grade to me. Remember, I have your raw answers.

**Scoring Chart**

|                         |   |           |
|-------------------------|---|-----------|
| 1. between 95% and 100% | - | 10 points |
| 2. between 90% and 94%  | - | 9 points  |
| 3. between 85% and 89%  | - | 8 points  |
| 4. between 80% and 84%  | - | 5 points  |
| 5. less than 80%        | - | 0 points  |
